

Title: Application Software Engineer

Type: Independent contractor, possibly leading to employment, or subcontractor

Description: As a member of the Product Support team, the Application Support Engineer (ASE) ensures that American Aerospace customers use our products to their full potential in real-world manned and unmanned airborne remote sensing applications.

As an ASE, you will master AAAI's leading-edge software solutions: including AiRWAI™ and other products.

Applying your product knowledge, you will assist customers in solving their detailed applications problems, perform evaluation and testing of new products, and contribute to product management and software development.

Successful applicants will have a record of academic and professional accomplishment coupled with effective written and oral communication skills. The proven abilities to manage multiple simultaneous activities, work effectively in a team environment, and perform leadership assignments successfully are strongly desirable.

Requirements:

- Bachelor of Science in Computer Science, Geography, Geographic Information Systems, Engineering or Mathematics
- Strong engineering skills are a must
- Two years experience preferred: C++, C#, .NET, GIS experience preferred
- ENVI, ArcMap, MATLAB, HTML
- Capable of multi-tasking to move multiple projects forward simultaneously
- Strong verbal and written communications skills are required
- Occasional travel
- US citizen

Location: Bridgeport, PA area

Required Education: Bachelor's Degree
